

A need for an upgraded, easy to use, affordable video and audio system was met for St. Paul's Lutheran Church. Video Reality crafted the perfect solution to meet their needs.

A Yamaha TF1 digital mixer with 17 faders was installed in place of the previous analog mixer. DSP was applied per channel inside the digital mixer and settings were saved for recall. 8 channels of wireless microphones will be rack mounted in the existing rack. These Sennheiser microphones will consist of 4 hand held and 4 lapel. JBL Professional speakers were wall mounted close to the existing main speakers as well as a JBL Professional ceiling speaker installed in the cry room. A Denon media player was rack mounted and connected to the mixer.

2 Samsung 75" TV's on articulating mounts were installed on the left and right. They will get signal from a wall plate in the sound area where an HDMI wall plate was installed. The signal will be extended over CAT6 to a receiver at the first display. The signal will then be split and sent to the second display via HDMI. TV's will be controlled via the included remotes.
