

## Great Plains Technology Center - Lawton Campus

When installing a video wall display, the objective is to provide a way for the client to have a large format display with the highest resolution and brightness with versatility and longevity. That was the exact solution for the lobby of Great Plains Technology Center.

We utilized 20 Novastar P1.99mm 330x200mm panels to create a fully functional video wall that allows for a rotation of images and videos for announcements, scheduling and more. It is wall mountable, allowing a sleek and aesthetically pleasing view. Along with the Novastar VX4S-N All in One Video controller, this provides powerful image processing and flexible control to the video wall. The all in one controller can be used and scaler, processor and a switcher.
